

DIGIPASS®

Programmer

Cost of ownership: Master it now!

The Digipass Programmer offers unrivalled flexibility in accessing Digipass features – and incomparable reaction time. VASCO Data Security's customers can now program Digipass themselves, whenever and as often as they like. It supports the Digipass family members and bypasses the need for highly qualified operators.

The package comes complete with software on CD-ROM, a Digilink®, 3 Digipass® Pro 300 and 1 red administrator Digipass®.

React faster, for less

When the network or organization changes, so do the security needs. So system owners must react quickly. Digipass Programmer is a full toolkit that allows resellers and/or system owners to support Digipass technology on their networks themselves. It contains everything needed to get acquainted with programming their Digipass. Whether it is a Digipass Pro 300 or 700, they all fit the same Digilink that comes with the software. System owners who want to support Digipass in their system can do so without any problem. Or resellers can support their customers by providing them with a full programming service.

This cuts the reaction time for network owners. People leaving or temporary staff jumping in? The Digipass programmer enables users to reprogram and re-initialize a Digipass on the fly. No need to wait for new ones that have to be ordered. Make the most of a small stock of Digipass and lose no time filling in order forms. By doing it in-house, you cut the time needed to get a Digipass in service – and people back to business.

Key features

PROGRAMMER SOFTWARE

- Runs under Windows 95/98 or Windows NT.
- Delivered on a CD-ROM with an administrator Digipass Pro 300 that is used to access software.
- Registered users can program an unlimited number of Digipass.
- Full graphic interface on the PC.
- Y2K compliant

DIGIPASS PROGRAMMER FEATURES

- Uses GMT time format to facilitate calls from different parts of the world.
- Programs a single or full range of Digipass. In this way, you can help out single Customers or program complete batches. In the last case, the smart programming interacts between the PC, Digilink and the operator. Serial numbers are checked to make certain the correct Digipass is on the Digilink before the programming sequence is effectively started.
- Opens only the features of the selected Digipass for security reasons.
- Integrated database with full query support for viewing, finding, deleting, freeing and assigning serial numbers.
- Contains pre-configured security levels based on VASCO Data Security's vast experience in security. This helps administrators make decisions and adapt the suggested settings to specific needs.

DIGILINK

- Supports Digipass Pro 250, 300, 550, 600, 700 and DESK 300. As they are all supported on the same Digilink only one Digilink is required and different Digipass family members can be supported with one single tool.
- Serial connection to the PC.
- Optical communication with the Digipass Pro 300 and 700.
- External power adapter.
